SUMMARY

Software developer with experience of 1.4 year developing applications and contributed in front-end and back-end with cross-functional teams.

TECHNICAL -SKILLS

- **Frontend :** Html , css, javascript , Vuejs
- **Backend :** Java
- **Devops :** Jenkins , Rancher
- **Database :** MySql , MongoDB

- **Code hosting and collaboration tool :** BitBucket
- **Authorization Mechanisms / Data Format** json web token (jwt) / Json

EXPERIENCE

Associate Software Engineer [Nuvizz inc] , Bangalore   **Oct 2023 - Oct 2024**

I developed and maintained web applications utilizing Vue.js for the frontend and Java for the backend. Collaborating with cross-functional teams, I designed and implemented new features to enhance functionality and meet specific requirements. Additionally, I optimized application performance through code refactoring and implemented RESTful APIs to streamline interactions.

C# developer Intern [iRely soft services pvt ltd] , Bangalore   **june 2023 - july 2023**

Gained hands-on experience in developing and maintaining software applications using C#. worked closely with senior developers to learn best practices in coding, debugging, and testing. My responsibilities included assisting in the design and implementation of features, contributing to code reviews, and optimizing existing code for better performance.

Java Game Developer [Renderedideas], Bangalore   **Dec 2022 - Jan 2023**

As a Java Game Developer , i developed engaging mobile games using LibGDX and Android Studio. I will collaborate with the development team to design, implement, and test game features, ensuring a seamless user experience. My role involveed optimizing game performance, troubleshooting issues, and contributing to the overall game design process.

PROJECT

■**Delivery Management Portal :** A delivery management platform designed to optimize logistics and streamline delivery processes for businesses.

- Frontend development using vuejs , css , bootstrap creating interactive,intuitive and responsive UI.
- Backend implementaion using JAVA to handle API and user operations.
- Database management utilized mongoDB and mysql to store manage user data and product information
- user-authentication and authoriztion was implemented using session and jwt.
- product Catlog and functionality : implemented such as searching, sorting , total calculation, filtering etc.
